

1. Download the latest Ubuntu Desktop ISO image and create a bootable USB drive using Rufus or Balena Etcher.

- 2. Install Ubuntu Desktop on a virtual machine using VirtualBox or VMware Player, and take a screenshot of the desktop after successful installation.**

- 3. During installation, set up a user account named 'cyberstudent' with a strong password (at least 8 characters, mix of letters, numbers, and symbols).**
- During the installation, I created a user account named as a cyberstudent. Then, I set a strong password which contains at least 8 characters including a combination of letters, numbers and symbols. So, this account be used by log in to work to the Ubuntu system.
- 4. After installing Ubuntu, open the terminal and run the command 'uname -a' to display OS details. Save the output to a text file named os-info.txt.**
- When installation of Ubuntu completed. I opened the terminal where I run the command `uname -a`. This command then displayed information about the operating system, kernel, system architecture and other system components. Then, I saved the output in a text file named `os-info.txt` using the command `uname -a > os.info.txt`.
