

1. Open your computer or laptop and take a clear photo or screenshot of the System Information or about page that shows your processor (CPU), RAM, and storage details.

Item	Value
System SKU	To be filled by O.E.M.
Processor	Intel(R) Core(TM) i3-3110M CPU @ 2.40GHz, 2400 Mhz, 2 Core(s), 4 Logical Pr...
BIOS Version/Date	Dell Inc. A09, 09/09/2013
SMBIOS Version	2.7
Embedded Controller Version	0.09
BIOS Mode	Legacy
BaseBoard Manufacturer	Dell Inc.
BaseBoard Product	0V1NDP
BaseBoard Version	A09
Platform Role	Mobile
Secure Boot State	Unsupported
PCR7 Configuration	Binding Not Possible
Windows Directory	C:\WINDOWS
System Directory	C:\WINDOWS\system32
Boot Device	\Device\HarddiskVolume1
Locale	United Kingdom
Hardware Abstraction Layer	Version = "10.0.19041.6456"
Username	DESKTOP-SDT51D4\rohan
Time Zone	India Standard Time
Installed Physical Memory (RAM)	4.00 GB
Total Physical Memory	3.87 GB
Available Physical Memory	804 MB
Total Virtual Memory	6.99 GB
Available Virtual Memory	2.70 GB
Page File Space	3.13 GB

Item	Value
Description	Disk drive
Manufacturer	(Standard disk drives)
Model	ST500LT012-1DG142
Bytes/Sector	512
Media Loaded	Yes
Media Type	Fixed hard disk
Partitions	3
SCSI Bus	0
SCSI Logical Unit	0
SCSI Port	0
SCSI Target ID	0
Sectors/Track	63
Size	465.76 GB (500,105,249,280 bytes)
Total Cylinders	60,801
Total Sectors	976,768,065
Total Tracks	15,504,255
Tracks/Cylinder	255
Partition	Disk #0, Partition #0
Partition Size	102.44 GB (109,994,522,112 bytes)
Partition Starting Offset	368,050,176 bytes
Partition	Disk #0, Partition #1
Partition Size	524.00 MB (549,453,824 bytes)
Partition Starting Offset	110,362,624,000 bytes
Partition	Disk #0, Partition #2
Partition Size	228.27 GB (245,099,397,120 bytes)
Partition Starting Offset	255 007 391 744 bytes

2. Draw and label a diagram (on paper or digitally) showing the main hardware components inside a computer cabinet, including CPU, RAM, motherboard, hard drive/SSD, power supply, and at least two ports (USB, HDMI, etc.).

3. List the hardware components you would check or upgrade to make your laptop run faster for gaming or video editing, and explain in one line why each upgrade helps.

Hardware Components	Why update requires?
RAM	More RAM allows games and video-editing software to run smoothly and handle larger files without slowing down.
SSD	A faster SSD improves windows boot time, application loading, file transfers and video-project loading.
GPU(Graphics Card)	A stronger GPU increases gaming FPS and speeds up video rendering and effects processing.
CPU (Processor)	A faster CPU improves overall performance, video encoding, multitasking and CPU-heavy games.
Cooling System	Better cooling prevents overheating and thermal throttling, allowing the laptop to maintain high performance for longer.

Storage Capacity	Having enough free SSD space prevents slowdowns and provides room for large games and video projects.
Thermal Paste/Fans	Replacing old thermal paste or cleaning the fans can improve heat transfer and reduce performance loss from overheating.

- 4. Research the difference between SSD and HDD storage, then write a short comparison (3 points) explaining which one is better for a student who wants fast boot times and why.**

Features	SSD	HDD
Speed	SSDs are much faster because they use flash memory and have no moving parts.	HDDs use spinning disks and mechanical read/write heads.
Boot time	SSD can significantly reduce the time needed to start windows and open applications because it has lower access latency.	HDD is quite slow as compared to SSD in loading and booting.
Best Choice for students	SSD is better for a student who wants fast boot times, quick application loading a more responsive.	HDs are generally cheaper for larger amounts of storage but they are slower.
