

1. Create a table listing 5 key cybersecurity terms (such as threat, vulnerability, risk, asset, attack vector) and write a one-line definition for each in your own words.

Terms	definition	Real-World Example
Threat	It means anything that could harm to networks, devices or systems.	Hacker, Malware, Any natural disaster
Vulnerability	It means a loophole or a weakness that can be used by an attacker.	Weak password, outdated software.
Risk	It means possibility of damage or loss because of threat.	A weak password could lead to account theft.
Asset	It means something valuable that needs protection.	Computer, server, password, any kind of data
Vector	It means a method or path an attacker decides to attack.	The way an attackers get access of banking software.

2. Research and find a real-world news article from the last 2 years about a major cyber-attack on an Indian company or app (for example, a breach involving Zomato, Paytm, or IRCTC). Summarize what happened and identify one threat, one vulnerability, and one risk mentioned in the incident.

Zoomcar Cyber-attack

- Last year in June, 2026 Bengaluru-based Indian car-sharing company named Zoomcar discovered a cybersecurity attack. In the attack, A hacker contacted Zoomcar and claimed to have access of the company's systems. When company's investigation found that an authorized third party had accessed database which contains personal data of approximately.

- **Threat** – Unauthorized attempt by an hacker to steal and misuse user’s personal information.
 - **Vulnerability** – In this incident access controls around sensitive user data were insufficient to prevent the attacker from reaching the dataset. However, the exact vulnerability has not been disclosed by Zoomcar.
 - **Risk** – After this attack, privacy breach, phishing, damage of reputation is the biggest risk.
3. Sign up for a free account on any online cybersecurity dashboard or threat intelligence tool (such as <https://www.cybermap.kaspersky.com/> or <https://threatmap.checkpoint.com/>). Take a screenshot of the dashboard and list 3 types of information or metrics you see displayed.

- **3-types of Information/metrics displayed**
- **Most-Attacked Country** – The dashboard shows India as the 13 most-attacked country at the time of I opened.
- **Threat Detection Categories** – It displays different types of detections including OAS, ODS, MAV, WAV, IDS, VUL, KAS and RAW along with its numbers.
- **Detections Discovered Since 00:00 GMT** – The dashboard provides information about the number of cyber threat detection discovered since the start of the day.

4. Write a simple phishing email template targeting users of a popular app (for example, 'Your Paytm account is suspended, click here to verify'). Highlight the suspicious elements that make it a phishing attempt.

Subject: Your Paytm account is suspended — Verify immediately

Dear Customer,

Your Paytm account has been temporarily suspended due to unusual activity.

To restore access, click here to verify your account: <http://paytm-account-verification-example.com>

You must complete verification within 24 hours, otherwise your account may be permanently blocked.

Please provide your password, OTP, and other account details to complete the verification.

Thank you,

Paytm Security Team

Phishing warning signs:

- Urgent language: “within 24 hours” creates panic.
- Fake/suspicious link: The URL is not an official Paytm domain.
- Requests for sensitive information: Legitimate services should not ask for your password or OTP by email.
- Threat of account suspension: Used to pressure the victim into acting quickly.
- Generic greeting: “Dear Customer” instead of using the customer's name.

5. Use ChatGPT or another AI tool to generate a simulated phishing email for a fictional food delivery app (like 'FoodiePal'). Copy the AI-generated email and explain which parts are likely to trick users and why.

Simulated Phishing Email

Subject: Urgent: Your FoodiePal order account needs verification

Hello Customer,

We detected unusual activity on your FoodiePal account. Your recent order has been placed on hold until you verify your account.

Please verify your account within 24 hours to avoid cancellation:

[Verify My FoodiePal Account] — <https://example.com/verify>

During verification, you may be asked to confirm your account information.

If you did not request this verification, please contact FoodiePal Support through the official FoodiePal app.

Thank you,

FoodiePal Security Team

What could trick user?

Suspicious part	Why it may work
"Urgent"	Creates pressure and makes users act quickly without checking the message carefully.
"Unusual activity"	Makes the recipient worry that their account has been compromised.
"Order has been placed on hold"	Uses a realistic food-delivery situation that could concern someone expecting an order.

"Within 24 hours"	Creates a deadline and asks to verification.
Fake Link	A suspicious domain or URL that doesn't belong to the actual company is a major warning sign.
Request to confirm account confirmation	Phishing emails often try to obtain sensitive information through fake verification processes.
Verify my FoodiePal Account	A prominent call-to-action can encourage users to click before thinking.
FoodiePal Security Team"	The sender name may appear official even though the message could come from an unrelated address.
